URINARY STONES

ETIOLOGY

METABOLIC

- 1) Hyper-calcuria.
- 2) Oxaluria.
- 3) URICOSURIA
(TUMOR lysis \$ - GOUT)

STASIS

- PROLONGED RECUMB.
- STRICTURE.

INFECTION

(2^{RY} STONE)

- DISTURBED CRYST. / COLLOID RATIO
- ULCERATION OF MUCOSA
→ nidus → STONE FORMATION.

Types

- All STONES ARE **RO** EXCEPT **PURE UA** (Radio-lucent)
- All STONES ARE IN **ACIDIC** URINE EXCEPT **PH.** (alk. urine)
- All STONES ARE **HARD** EXCEPT **PH.** (friable dt infection)
- All STONES ARE **LAMINATED** EXCEPT **PH.** (amorphous)
- All STONES ARE **SMOOTH** EXCEPT **OXALATE** (spiky)
→ dark brown in color dt bl. pigment
→ early symptoms "HEMATURIA" → small stones.

NB: TRIPLE PH. STONE = ammonium, Mg. Ca salts.
ENLARGES rapidly filling the RENAL calyx. "**STAG-HORN STONE**"

INVEST.

"CLASSICAL"

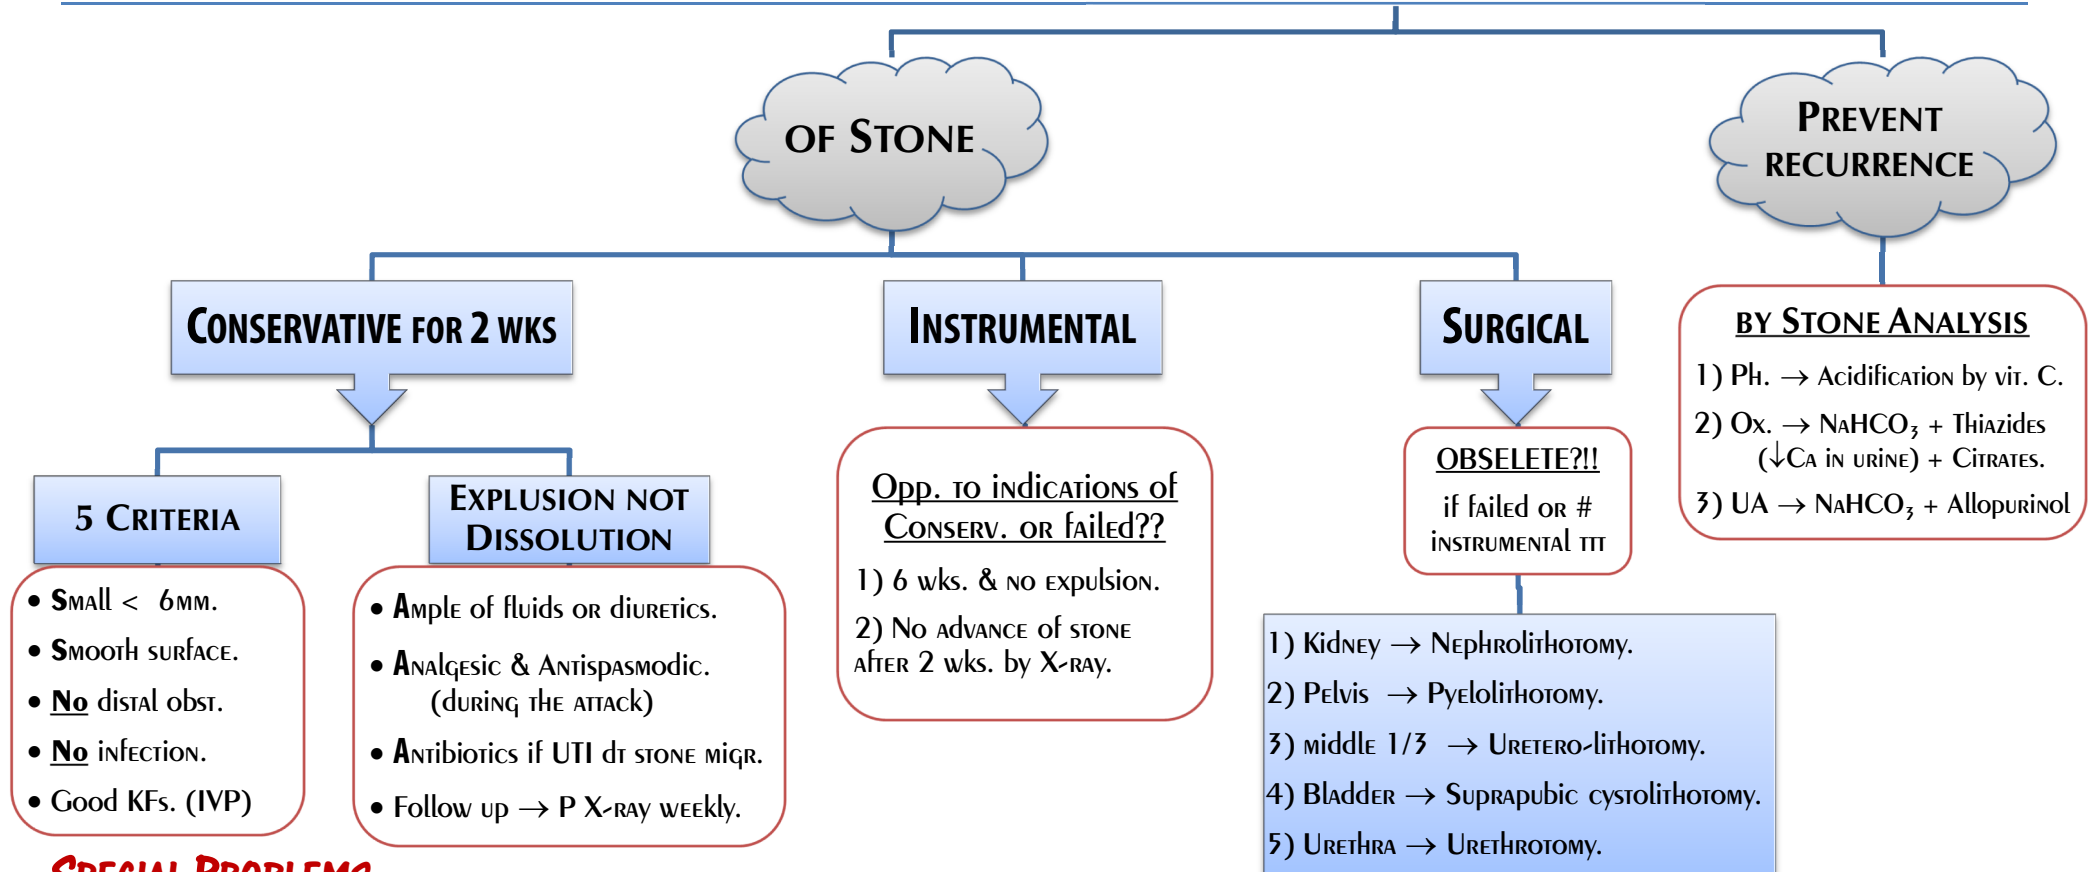

- 1) **URINE A.** → Pus, RBCs, Crystals, C&S.
- 2) **KFTs.**
- 3) **PXR** → 90% of URINARY STONES ARE RO.
- 4) **US** → • Radio-lucent STONES. (10%)
in kidney, UB & upper URETER.
• Hydro-nephrosis.
- 5) **IVP** → as US + asses Kidney function.

Complications

"OMUMI"

- 1) **ObSTRUCTION** → back pressure
 - Hydroureter - Hydronephrosis.
 - Calculus ANURIA.
 - ACUTE RETENTION IN STONE URETHRA.
- 2) **MIGRATION** → RECURRENT ATTACKS OF URETERIC COLIC.
- 3) **ULCERATION** → HAEMATURIA.
- 4) **METAPLASIA** → SCC ON TOP OF leukoplakia.
- 5) **INFECTION** → pyelo-nephritis, pyonephrosis & Cystitis.

TREATMENT OF URINARY STONES

SPECIAL PROBLEMS

BI-LATERAL RENAL STONE

SAVE 1ST THE BETTER KIDNEY FUNCTIONING (IVP) EXCEPT:

- Pain on one side.
- Pyonephrosis on one side.
- Bi-lateral stag horn stone (if asymptomatic + No infection + HR pt.) → Only conservative.

STAG HORN STONE

- Combined ESWL & PCNL.
- If failed → Pyelo-nephro-lithotomy.
- If uni-lat. in non-functioning kidney → Nephrectomy.

MULTIPLE LEVEL STONES

- Relieve lower obst. 1st as it leads to more damage.
- URETHRA then URETER then KIDNEY the last is BLADDER.

KIDNEY STONE	URETERIC STONE	UB STONE	URETHRA
<p><u>ASYMPTOMATIC.</u></p> <p><u>PAIN MAINLY:</u></p> <ul style="list-style-type: none"> Dull aching pain in loin. C/P

MAINLY ASYMPT. (95%)/ Triad of PROSTATISM

- 1) **NIGHT FREQUENCY & URGENCY.**
(LATER diURNAL dt cystitis)
- 2) **Diff. micITUR.** TO **START** (straining ↑ cong. → ↑ obst.)
MAINTAIN (weak, forked, bet. legs)
FINISH. (dribbling of urine)
- 3) **SEXUAL** → EARLY libido / LATE impotence.

SIGNS **G** = UREMIA, FEVER.

A = RENAL MASS in hydro-NEPH.

L = PR → (5S) SMOOTH, SOFT, Sulci↑,
SYMMETRICAL, Sliding MUCOSA OVER RECTUM.

- 1) **PATH.** → AS BPH + DISCOVERED AT biopsy AFTER ENUCLEATION. (HISTOLOGICAL surprise)
- 2) **DOUBTFUL** → AS BPH + **PR = HARD NODULE!**
- 3) **CERTAIN** → AS BPH BUT rapid ONSET & PROGRESSIVE COURSE; BUT **PR = 3aks el 5S.**
- 4) **OCCULT** → NOTHING EXCEPT back pain dt METASTASIS. (DD = disc prolapse)

DIFFERENTIAL DIAGNOSIS:

- BPH – CANCER PROSTATE.
- CHRONIC PROSTATISM – HEMATURIA.

1) **Early Abd. MASS.**

2) **LATE HEMATURIA.**

- CACHEXIA + Slim CHEST.

- 1) **FUO.**
- 2) **VAGUE ABD. PAIN** dt HQE inside TUMOR.
- 3) **HTN** dt COMPRESSION ON RENAL vs. → ISCHEMIA → ⊕RAS
- 4) **ASS. CONGENITAL ANOMALIES.**
 - MACRO-glossia – Aniridia.
 - NEURO-fibroma.
 - Cryptorchidism – hypospadias.

SPINDLE
SHAPED CHILD

1) **HEMATURIA: EARLY**

- TOTAL, CAUSELESS.
- PAINLESS, PROFUSE, PERIODIC.

2) **PAIN:**

- DRAGGING – dull ache – clot colic.
- LATER dt lumbar NS. infiltration.

3) **RENAL MASS. (SEE GENERAL)**

4) **2^{RY} VARICOCELE / METASTASIS / FUO.**

5) **PARA malign. \$** → RENIN – PRH – EP.

(Triad occurs in 10% of pts. = INOPERABLE)

KIDNEY RUPTURE

ETIOLOGY

- **EXTRA-PERIT. RUPTRE** dt blunt TRAUMA.
- **INTRA-PERIT. RUPTURE DT:** Penetrating Or blunt trauma in hydro-nephrotic kidney or child dt little peri-nephric fat.

PATHOLOGY:

- Sub-cap. HEMATOMA. (Small / large)
- TEAR. (SUPERFICIAL / DEEP).
- AVULSION. (of a pole / pedicle)

INVEST.

- 1) UA & KFTs → RBCs. (micro & macroscopic)
- 2) P X-RAY → fracture ribs + oblit. of psoas shadow + elevated copula of diaph. dt sub-phrenic collection.
- 3) IVP → EXTRA-VASATION + ASSES both kidney f.
- 4) US & CT SCAN E CONTRAST:
 - EXTRAVASATION. / PATHOLOGY. (SEE ABOVE)
 - RUPTURE. (INTRA / EXTRA-PERITONEAL)
 - ASSES both kidney functions.

CL./P

Triad of

- 1) HISTORY of TRAUMA.
- 2) HEMATURIA... ABSENT IN:
 - **Tear** → Small or superficial.
 - **Ureter** → avulsed or clot retentn.
 - **Anuria** from s. shock.
 - **Avulsion** of the whole kidney.
- 3) **RENAL pain & Clot colic.**

Signs

G → Shock.

Intra-peritoneal

Insp.
Hemo-peritoneum.
↓ mov. e respiration.

palpation
TR, RT + G & R all over

perc. Shifting dullness

Auscult Silent abd.

Extra-peritoneal

Bruises & ecchymosis in loin.

Same but at the loin + swelling dt pseudo-hemato hydroneph.

TREATMENT

Closed injury

CONSERVATIVE FOR 2 WKS

- R & M.
- CBC / 12 hrs.
- US / 24 hrs for perinephric fluid collection.
- Swelling in the loin.

COMP.

Early (APC)

- 1) TRAUMATIC ANURIA from shock.
- 2) PERINEPHRIC ABSCESS.
- 3) PSEUDO-HYDRONEPH. → accum. of urine + blood in peri-nephric space.
- 4) PERITONITIS.
- 5) P. ileus dt retro-perit. hematoma.
- 6) CLOT RETENTION.
- 7) URINARY FISTULA.

LATE

- 1) Nephroptosis → dt tearing of supporting t.
- 2) HTN → dt fibrosis → Ischemia → ⊕RAS.
- 3) RA ANEURYSM.

Surgical

Indications

OPEN INJ. (INTRA-PERIT. HGE) OR CLOSED INJ. E FAILED CONSERV.

- PROGRESSIVE SHOCK.
- ↑ HEMATURIA / ↓ Hb.
- MASS in the loin /peri-nephric inf.

EXPLORATION (ABD. APPROACH) & CONSERVE ! KIDNEY AMAP.

- SMALL TEAR → surgicell.
- LARGE TEAR → vetricly mesh or omental patch.
- ONE POLE LACERATED → partial nephrectomy.
- LACERATED + (N) OTHER KIDNEY → nephrectomy.
- SOLITARY KIDNEY → packing e gauze for 48 hrs. **8**

CONG. POLYCYSTIC KIDNEY

ETIOLOGY	<ul style="list-style-type: none"> Failure of fusion between metanephros (kidney) & mesonephros (pelvis & collecting system) → retention cysts → Compression on renal tissue. It might be a part of cystic changes of the body. (lung – pancreas – liver)
PATH.	<ul style="list-style-type: none"> Both kidneys are enlarged with multiple cysts. Cysts are not intercommunicated & not connected to renal pelvis. Cysts compress renal tissue → pressure atrophy. <p><i>Cysts are communicated in hydro-nephrosis.</i></p>
CL./ P	<ul style="list-style-type: none"> At birth → Obstructed labor. Infantile type (AR) → Uremia & renal rickets. ADult type: (AD) → at 4th decade <ul style="list-style-type: none"> SILENT ASYMT. → SUDDENLY UREMIA. (M/ C PRESENTATION) Bilateral renal mass. Pain → dragging or dull ache. Hematuria → dt rupture of cyst in the renal pelvis. Hypertension → dt compression on renal vs.
DD	Hydro-nephrosis & Multi-cystic kidney.
INVEST.	<ul style="list-style-type: none"> UA & KFTs. IVP → Bilateral regular spider leg appearance. U/S → multiple cysts. "of choice" <p><i>Irregular & DEAD in hyper-nephroma</i></p>
TTT.	<ol style="list-style-type: none"> No Nephrectomy unless Renal Transplant is possible since its bilateral. Rovsing operation. (rupture the cysts → not beneficial)

MULTI-CYSTIC KIDNEY:

- **NON-HEREDITARY.** (UNKNOWN ETIOLOGY)
- **UNILATERAL.**
- **PRE-MALIGNANT.**
- **SO TTT. is NEPHRECTOMY.**

MISCELLANEOUS

BPH = CAUSES OF NIGHT FREQUENCY & URGENCY

- 1) **AT Night** dt WARMTH & lack of ms. pump.
- 2) **↓ UB capacity** dt ENCROACHMENT of the middle lobe.
- 3) **Residual urine** in "post. Prostatic pouch"
- 4) **DETRUSOR MS.** hyper-reflexia.
- 5) **ATony** of the bladder.
- 6) Exposure of prostatic urethra to urine inside the UB → desire.
- 7) Urgency is dt stretch of int. sphincter → SEVER desire.

CANCER PROSTATE = GLEASON'S SCORE

- | | | |
|-------------|--------------|-------------------|
| • G1 | Well diff. | → GLEASON 2 – 4. |
| • G2 | Mod. diff | → GLEASON 5 – 6. |
| • G3 | poorly diff. | → GLEASON 7 – 8. |
| • G4 | anaplastic | → GLEASON 9 – 10. |

HYPER-NEPHROMA: PATHOLOGICAL TYPES

- | | |
|--------------------------------|----------------------------------|
| • CLEAR CELL | → dt ↑ glycogen & lipid content. |
| • GRANULAR | → full of mitochondria. |
| • MIXED (M/C) | → GRANULAR + CLEAR type. |
| • MIXED + SPINDLE CELLS | → MOST AGGRESSIVE. |

TCC of RENAL pelvis

- Multi-CENTERIC.
- Papilloma → bleeding & PRE-CANCEROUS.
- Local implantation → URETER.
- TTT → Nephro-urterectomy = kidney + whole URETER.

BILHARZIAL CYSTITIS → PRECANCEROUS LESIONS

1) **B OVA:**

- MECH. irritation.
- LONG STANDING cystitis.
- BNO + STASIS.

- 2) **INFECTED ALKALINE URINE** → phosphatic encrustation cystitis + sq. metaplasia.
- 3) **NITRATES IN VEGETABLES & DRINKING WATER** → EXCRETED IN URINE → ACTED UPON by BACTERIA → N. NITROSO compounds which ARE PRE-CANCEROUS.

PUJ OBSTRUCTION

- Etiology
 - 1) URETERO-pelvic tumors, polyps or valves.
 - 2) Cong. Stenosis.
 - 3) Motility disorder.
 - 4) Aberrant renal vs. → compressing the PUJ.

- | | |
|-----------------|--|
| • INVEST | IVP → dilated pelvi-calycal system + contrast suddenly stops at ! PUJ. |
| • TTT. | <ul style="list-style-type: none">• FUNCTIONING → RECONSTRUCTION of pelvis. "Anderson Hynes op."• NON-FUNCTIONING → Nephrectomy if the other kidney is (N). |
